OBSERVATIONS: Big patch of tufo inclusions (robber) in center-western part of 1340 on wall 1162; iron hook and lots of charcoal + burnt bone found on edges of also found a burnt pipe-not in south-western corner. Tufo "patch".

DESCRIPTION: Position within sector: Lower southwestern corner near 2011 excavation limit
 Shape: roughly rectangular w/ northern projection along wall 1162 and eastern curve around tufo floor

For layers complete this section:
 Surface (slope direction; visible inclusions): slopes downward toward south + excavation limit (2011)
 Observations about inclusions (Clusters? Deposition slope): tufo inclusion patch w/ iron hook + slag, lots of charcoal + some burnt bone on eastern side of tufo patch
 Observations about thickness (Increases? Decreases?): decreases in thickness in south-western corner of SU
 Nature of the interface with layer below: sharp diffuse commingled other (specify)

INTERPRETATION

Soil abutting B20 contained clusters of various types including a tub "rubble pile-esque patch" in the western-central area, around which the other deposits were scattered; iron hoops, slag, other metal; burnt bones, a pine-nut and charcoal. Additionally there were high frequencies of tile + pottery shards; the whole SU was bounded by wall SU 1162 and another or several other walls as well as partially covered the fragmentary tufo floor to the east which appears to go over one of the walls suggesting multiple occupation layers. This accumulation layer seems to be a mix of debris from various activities.
